Advisory Research and Evaluation Team [1]

The Advisory Research and Evaluation Team (ARET) addresses program evaluation and applied research.

- OLLI's program evaluation function uses surveys and systematic studies to assess how well the organization is meeting its goals in providing innovative approaches and emerging methods in older adult learning, addressing member satisfaction, and supporting member community.
- OLLI's research program seeks to participate as a sub-investigator in qualitative studies that address the perceptions, perspective, practices, and participation of older adults in our evolving society.
